

Scientist for preclinical research

Pherecydes Pharma is biotech company specialized in Phage therapy, recently listed on the stock market. Pherecydes is one of the top 3 most competitive companies in this field worldwide. Clinical studies will be initiated by year-end and next year and new innovative preclinical programs to cover unmet medical needs will start soon.

We are looking for a motivated scientist with expertise in phages to join our team in the Research and Development team (Romainville). You will be in charge of one of the new program developments with the ambition to rapidly translate preclinical research into the clinic.

Responsibilities

Working hand-in-hand with our Phage Biologists and Microbiologists with the support of our highly specialized technical staff you will participate to the study design, and be responsible for its application.

Starting from scratch, you will have to find new phages, select the best ones, characterize them according to a framework predefined with the regulatory agencies, and work in close collaboration with the process and analytical development teams of Pherecydes.

Requirements

PhD with expertise in phage biology

Previous experience in *in vivo* models is a plus.

Strong interactive skills and ability to work with multiple teams

Excellent mastering of scientific English language, written and spoken

Ability to work independently on different tasks without compromising quality and reliability
